2. In order to verify compliance, ambient noise monitoring is to be carried out for 16 hours (day time) and violation of specific source of noise can be identified due to background noise. Further, as impact of the noise source, duration of which mostly varies from few seconds to few minutes gets leveled when monitoring for long duration (16 hrs.) is carried out.

3. Recently, CPCB has carried out demonstration of sound limiters and it was found that sound limiter is not full proof system and same can easily temper with. It is difficult for authorities to set limits for sound limiters in absence of source standards for loudspeakers while granting permission for public address system.

4. Source specific standards have been notified for fire crackers, generator sets, construction equipment, vehicles etc. However, Source specific standards for loudspeakers and public address system yet to be framed. In view of (i-iv) above, it is suggested that source specific standards be framed for loudspeaker and public address system with specific usage type.
